

FINGERPRINT ENABLED EVM

Description: The Integrated ATL project FINGERPRINT ENABLED EVM has been ideated to make our voting system more efficient and reliable. The System has been equipped with Fingerprint sensor which enables to check whether the person has already given vote or not. The voter has to press the button of any Group which he wants to give vote and he has to scan of his finger in the fingerprint sensor.

Materials Required:

1. Arduino Uno
2. R305 Fingerprint Sensor
3. Push button switches
4. Power supply
5. LCD I2C Display Module
